

Spencer Delimas

Software Engineer & Founder, Zenira Studio

spencerdelimas@gmail.com Nyeri, Kenya

github.com/lts-Delimas

BSc IT, DeKUT · Class of 2028

Full-stack and backend engineer based in Nyeri, Kenya, building developer-facing infrastructure (payment webhooks, auth, storefronts) for the Kenyan market through my own studio. Active in campus tech communities at DeKUT, including a 1st-place hackathon win, and a hands-on Claude Pro / Claude Code user who ships real production projects with it rather than toy demos. Looking to bring that energy to a Claude Builder Club at DeKUT.

EDUCATION

Dedan Kimathi University of Technology (DeKUT)

BSc in Information Technology · Expected graduation: Early 2028

LEADERSHIP & COMMUNITY

Founder, Zenira Studio

Software agency serving Kenyan SMEs · zenira.studio

- Built and shipped the full agency stack solo: marketing site, pricing, client onboarding, and delivery pipeline, using Next.js and Tailwind.
- Package tiers (Starter, Basic Shop, Growth) designed specifically around what small Kenyan businesses can afford and need — not templated pricing.

1st Place — Coding Sprints (2nd Edition), DeKUT

Campus hackathon

- Built "vibee-chat," a real-time WhatsApp group-chat clone in a 1-hour build window using WebRTC, under a mandatory Google-tool constraint.

FEATURED PROJECTS

PesaHook — M-Pesa Webhook Gateway (Go)

github.com/lts-Delimas/pesaHook · v1.0.0, MIT licensed

- Infrastructure product that normalizes Safaricom Daraja's inconsistent M-Pesa webhook payloads and guarantees delivery to a developer's server via retries, backoff, and dead-letter storage.
- Full production build: Postgres persistence, API-key auth, per-account rate limiting, HMAC signature verification, and a live Next.js dashboard for endpoints, events, dead letters, and API keys.
- Built end-to-end using Claude Code as a daily pair-programming partner — architecture decisions, debugging real integration bugs (e.g. nil-slice JSON serialization), and late-night build sessions after classes.

Grabit — Storefront Platform for Kenyan Sellers (Coming Soon)

Prototype phase · grabit.co.ke

- A Shopify-style alternative built specifically for Kenyan fashion sellers (clothing, shoes, jewellery) who sell without a website — sign up and get a shareable storefront link.
- Currently prototyping with Claude Code, using it to move quickly from concept to working screens while keeping the codebase understandable rather than AI-generated boilerplate.

ClientFlow & Gatekeepers — CRM and Auth-as-a-Service

Express/TypeScript and Go

- ClientFlow: a client-management CRM (Express, TypeScript, raw PostgreSQL, JWT auth, ownership-chain authorization) — first project in a four-part portfolio roadmap.
- Gatekeepers: a Clerk/Auth0-style Auth-as-a-Service platform in Go (chi, pgx, sqlc) with JWT/refresh sessions and route-protection middleware, built to be reused across my own future projects.

HOW I USE CLAUDE

- Recently upgraded to Claude Pro to support longer, deeper build sessions rather than one-off code snippets.
- Use Claude Code as an active development partner on real, shipping projects (PesaHook, Grabit), not just homework help — often in late-night sessions between coursework and Zenira Studio client work.
- Concept-first workflow: understand a layer (e.g. Go concurrency, webhook signature verification) before implementing it, and type all code by hand to retain what I learn.

TECHNICAL SKILLS

Languages: Go, TypeScript, JavaScript, SQL | **Backend:** Node.js, Express, chi, REST APIs, JWT auth, webhooks, rate limiting

Frontend: Next.js (App Router), React, Tailwind CSS | **Data & Infra:** PostgreSQL, Docker, Neon, Vercel, GitHub Actions

Tools: Claude Code, Claude Pro, Git/GitHub
